

IN THE ABSTRACT:

Please cancel the current abstract and insert the following therefor.

-- An information processing apparatus for executing a predetermined procedure corresponding to a command designated by a user. The apparatus includes a database which holds plural candidates corresponding to plural commands, a selection unit which selects a command group, which includes some commands which relate, in response to the user operation, a decision button which is operable by the user, a voice output unit which outputs each candidate as voice information from the candidates, which correspond to the commands included in the selected command group, one at a time, and a determination unit which determines a command designated by the user. When the user operates the decision button during the voice information corresponding to one candidate that is output by the voice output unit, the determination unit determines a command corresponding to that candidate as the designated command, and when the user operates the decision button during the voice information corresponding to another candidate that is output by the voice output unit, the determination unit determines a command corresponding to the other candidate as the designated command. --
